

Global device management simplified

The complexities of managing the devices for globally distributed workforces are becoming increasingly stressful and costly. IT managers now have to take into account deploying devices across borders, maintaining security and compliance, and ensuring they are recovered once an employee leaves.

To end these logistical challenges, the IT equipment management platform, GroWrk, has partnered with JumpCloud, renowned for its cloud-based directory services. This collaboration enhances the GroWrk platform with JumpCloud's advanced mobile device management (MDM) and identity access management (IAM) features.

How can you transform your IT equipment management?

The integration of GroWrk with JumpCloud revolutionizes the employee lifecycle for distributed teams, making IT equipment management a breeze. Let's see how this streamlined process works:

Don't hesitate to start 2024 right!

New users

Once a company signs up for GroWrk, they can manage their devices through the intuitive dashboard, with the JumpCloud integration pre-installed in their account. Current JumpCloud customers can directly import their workforce into GroWrk.

Upgrading existing plans

Current GroWrk users can effortlessly upgrade their plans to include Jumpcloud's MDM capabilities. **Talk to your account manager to get the integration today!**

Discover the future of IT asset management

with GroWrk and JumpCloud

-  Control all your devices from a single dashboard.
-  Accelerate and simplify your global onboarding.
-  Quickly address any security concerns, or device management needs.
-  Maintain the safety and integrity of your distributed IT infrastructure.
